

## AS13704D Quad Operational Transconductance Amplifiers (OTA) with linearizing diodes

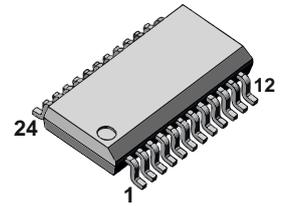

### Features

- $g_m$  adjustable over 6 decades
- excellent  $g_m$  linearity
- excellent matching between amplifiers
- linearizing diodes for reduced output distortion
- high output SNR
- LM13700 functional replacement (without output buffers)

### Applications

- current-controlled amplifiers
- stereo audio amplifiers
- current-controlled impedances
- current-controlled filters
- current-controlled oscillators
- multiplexers
- timers
- S&H circuits

### AS13704 D

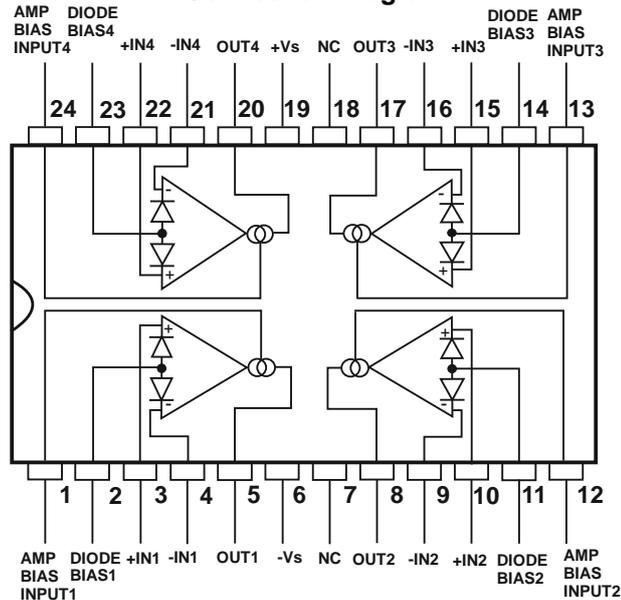

SSOP24 , 150mil, 0.635 mm

### General Description

The AS13704D consists of four current-controlled transconductance amplifiers OTA, each with differential inputs and a push-pull output. All amplifiers share common supplies, but operate independently. Linearizing diodes are provided at the inputs to reduce distortion and allow higher input levels. The result is a 10-dB signal-to-noise improvement referenced to 0.5 percent THD.

### Pin Functions

Name	Pin Number	Description
Amp bias input 1,2,3,4	1, 12, 13, 24	Current bias input
Diode bias 1,2,3,4	2, 11, 14, 23	Linearizing diode bias input
+IN 1,2,3,4	3, 10, 15, 22	Positive input
- IN 1,2,3,4	4, 9, 16, 21	Negative input
Output 1,2,3,4	5, 8, 17, 20	Output
+Vs	19	Positive power supply
-Vs	6	Negative power supply
NC	7, 18	Not connected

Specifications

Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

	MIN	MAX	UNIT
Supply voltage		36 V <sub>DC</sub> or ±18	V
DC input voltage	+Vs	-Vs	V
Differential input voltage		±5	V
Diode bias current (I <sub>D</sub> )		2	mA
Amplifier bias current (I <sub>ABC</sub> )		2	mA
Power dissipation <sup>(2)</sup> T <sub>A</sub> = 25°C - AS13704D		400	mW
Output short circuit duration		Continuous	
Storage temperature, T <sub>stg</sub>	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) For operation at ambient temperatures above 25°C, the device must be derated based on a 150°C maximum junction temperature and a thermal resistance, junction to ambient, as follows: AS13704D, 90°C/W.

Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

	MIN	MAX	UNIT
+Vs (single-supply configuration)	9.5	32	V
+Vs (dual-supply configuration)	4.75	16	V
- Vs (dual-supply configuration)	-16	-4.75	V
Operating temperature, T <sub>A</sub>	0	70	°C

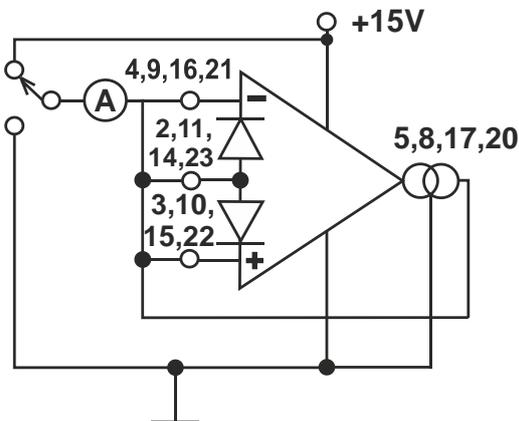

**Electrical Characteristics**

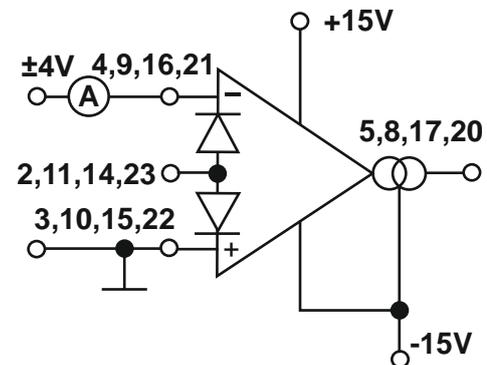

These specifications apply for  $V_S = \pm 15\text{ V}$ ,  $T_A = 25^\circ\text{C}$ , amplifier bias current ( $I_{ABC}$ ) = 500  $\mu\text{A}$ , pins 2, 11, 14, 23 open unless otherwise specified. The outputs are open.
